PROJECTS

The Tavern: Front End Capstone

React/CSS/Bootstrap/external API/dbdiagram

Created a React app that allows new and veteran tabletop role-playing gamers to search an external API for D&D 5th edition related content and to create and save their own homebrew content to a local API.

- Register and log into their own unique account
- Search an external API for D&D 5th edition related content
- Create and save content for their games
- Create and save session and world building notes
- Edit and delete all user generated data within the app

Empower Healthy Students: Back End Capstone

ASP.NET Core MVC/Bootstrap/Figma/dbdiagram

Created a brochure app with ASP.NET Core MVC utilizing Entity and Identity framework that allows the user to upload and create content to share with other users.

- Admin can upload curriculum, blog posts, and event information
- Admin can create, edit, and delete content
- User can register and log into their own unique account
- User can leave comments on blog posts
- User can download curriculum

EDUCATION

Nashville Software School
Certificate in Software Development,
2020

Visible Music College;
BM Modern Worship Leading, 2011

Middle Tennessee State University;
BS Liberal Studies, 2003

ABOUT

My whole life has consisted of me being in ministry, whether it was vocational or voluntary. This has led me to take various jobs over the years to subsidize my basic needs. Recently I felt the need to make a career change. To do this I needed to acquire a new skill. After doing some research and seeking advice, I decided to enroll in Nashville Software School's Full Stack program. I didn't really know what I was getting into, but I am grateful that I ventured down this path. Everything I have learned and experienced in this program has left me in awe. I have been stretched, challenged, and have developed a love for coding. I am excited for how I can use this in my own creative endeavors, seeing way to use it to benefit others, and turning this into a career.

SOFTWARE EXPERIENCE

- Utilize third party Api's to render data to a website application
- Create an API to store and render user data
- Create a single page application using Javascript, CSS, HTML, React, ASP.NET Core MVC
- Manage Github flow through individual and group projects
- Create a CRUD application during individual and group projects using a JSON-Server

Nutshell

Javascript/HTML5/React/Bootstrap/local API

Worked with 4 other individuals to create a dashboard that allows the user to register and log into a unique account, send messages, add news, events, tasks, and friends using React to implement full CRUD.

Individually responsible for the news components which allowed the user to add, edit, and delete data using a local JSON-Server

Holiday Road

Javascript/HTML5/CSS3/external API

Worked with 3 other individuals to create an itinerary geared toward a particular client using a 3rd party API allowing the user to search parks, eateries, and destinations and to create and save an itinerary to a local JSON database.

Individually responsible for destination components which allowed users to search an external API for a destination, display it on the DOM, and save it to a local API.

Bangazon

ASP.NET Core MVC/Bootstrap/local API

Worked with 3 other individuals to create a commerce app that allowed users to create a unique account by which they could buy and sell products.

Individually responsible for creating components to allow users to label products, add and remove products from shopping cart, and view order history.

WORK EXPERIENCE

Vaco, Franklin, TN

Data Entry Assistant, 2019
